EDUCATION

Vellore Institute of Technology India Sep 2022 – May 2027
M.Tech (5-Year Integrated) – Computer Science & Engineering
Specialization: Computational and Data Science CGPA: 8.51

SKILLS SUMMARY

Programming: Python, C++, SQL
Data Science & Machine Learning: Data Cleaning, Data Wrangling, Feature Engineering, Exploratory Data Analysis (EDA), Model Evaluation, Statistical Analysis
Machine Learning & Deep Learning: Supervised Learning, Regression, Classification, Random Forest, XG-Boost, Neural Networks, CNNs
Tools & Frameworks: Pandas, NumPy, Scikit-learn, TensorFlow, Keras, Matplotlib, Seaborn
Additional: Data Visualization, Microsoft Excel, Power BI (Basic), ETL, Data Pipeline

EXPERIENCE

Inflynx Technologies Pvt. Ltd. Bhubaneswar, Odisha
Data Analyst Intern (On-site) Oct 2025–Dec 2025

- **Engineered an end-to-end machine learning pipeline** for crop yield prediction using **10K+ records**, improving data processing efficiency and streamlining model deployment workflow
- **Designed and optimized 3+ ML models** (Regression, Random Forest, XGBoost), achieving boosted prediction accuracy and enhanced model performance using **RMSE, MAE, and R²**.
- **Improved processing speed by 20%** through refined data pipelines and feature engineering, and delivered **10+ dashboards** to support data-driven decision-making.

PROJECTS

Chest X-Ray Medical Diagnosis with Deep Learning — 2025 [GitHub]
Tools & Technologies: Python, TensorFlow, Keras, DenseNet-121, CNN, Grad-CAM
Developed DenseNet-121 based deep learning model to classify **14** chest diseases using **1000+** X-ray images. Achieved AUC up to **0.90** with **15%** performance improvement using hyperparameter tuning and cross-validation. Implemented class imbalance handling to reduce false negatives and improve diagnostic reliability. Integrated Grad-CAM visualization and streamlined pipeline to reduce training time by **20%**.

Enron Fraud Detection using Machine Learning — 2024 [GitHub]
Tools & Technologies: Python, Scikit-learn, PCA, Decision Tree, Random Forest, SVC, GaussianNB
Built a machine learning fraud detection system using the Enron dataset with **143** samples and **20** features. Applied feature engineering, PCA, and feature selection to enhance data quality and model performance. Designed classification models including Decision Tree, Random Forest, SVM, and Naive Bayes. Enhanced F1-score and reduced false negatives through cross-validation and hyperparameter tuning.

CERTIFICATIONS

Applied Machine Learning in Python — Coursera
AWS Cloud Practitioner Essentials — AWS
Introduction to AI & Data Analysis — Microsoft

CO-CURRICULAR ACTIVITIES

Solved **350+** Data Structures and Algorithms problems on LeetCode [LeetCode]
Completed **150+** coding challenges on GeeksforGeeks to strengthen core CS concepts [GeeksforGeeks]
Utilized Data Structures & Algorithms, debugging, and optimization techniques across competitive programming platforms
Solved coding challenges to optimize runtime and reduce time complexity

EXTRA-CURRICULAR & ACHIEVEMENTS

- **Volunteer — Data Science Club:** Mentored 200+ students through 15+ technical workshops on development fundamentals and algorithms (Aug 2023 – Jun 2024)
- **Volunteer — Sports Club:** Organized and managed tournaments, matches, and sports events (Dec 2022 – Apr 2023)
- **Member — National Service Scheme (NSS):** Contributed 50+ volunteer hours to rural education and environmental awareness initiatives
- **NSS Team Lead:** Led a team of 20 volunteers in a large-scale tree plantation drive, planting 10,000+ trees
